

SFD21 - Nasuni

*Anne Blanchard

Double digit growth over the last few years

“Explosion of unstructured data as the foundation of our business”

Cloud native - built the filesystem in the cloud

*Andres Rodriguez

Filesystem exists entirely in the object store layer

Open up new ways of accessing your enterprise filesystem

One of the requirements is to be able to localise data, in a world where data is in the cloud, everywhere

2 things slowing down VDI adoption

- latency

- expense and complexity of deployments (frontend needs tonnes of resources)

Couple the public cloud with a global file system solves these problems

Management console can be used to release file locks

*Tom Rose

Cloud-Wash vs Cloud-Native

Complex

Constrained

Costly

*Core Technology

NOC - Nasuni Orchestration Center

Nasuni Global File Lock

Global Lock Architecture - takes advantage of DynamoDB

*Demo - Russ Neufeld

Nasuni Analytics Connector
